
CRYPTO PRICE PREDICTION PROPOSAL

Prepared For:
Eng. Ruba Alkhusheiny

Prepared By:
Eng. Mohammad Sadiq

ABOUT PROPOSAL

This project is designed to provide accurate and reliable predictions of cryptocurrency prices to investors, in order to help them make informed investment decisions, and this model was built unlike any other method in order to predict the rise or fall of the market according to gold, oil and dollar " DXY "prices and many feature.

THE PURPOSE OF THE PROJECT

Most new traders in the field of Cryptocurrencies may face several obstacles that prevent them from making the right decision to invest well or make a good speculation due to their ignorance or insufficient learning of trader strategies, the most important of which is technical analysis, and this is the reason why this model was created. This project's main application is to support and ease the prediction of the existence of digital currencies that have a rise or fall so that they can be benefited to achieve and spread awareness of the science of digital currencies and create an easy and simple environment that simulates the human mind.

TARGET AUDIENCE

The target audience is cryptocurrency investors who are looking for accurate price predictions. And analysts who want to dispense with technical analysis and new traders who want to learn this field but do not have an educational reference.

GOALS AND OBJECTIVES

- Improving the accuracy of your price predictions, increasing the number of users who use your predictions, or generating a certain amount of revenue from your predictions
- To provide market analysis and insights: A cryptocurrency price prediction project might aim to provide insights and analysis on the current state of the market, as well as make predictions about future market trends.
- To inform investment decisions: Some people may use cryptocurrency price predictions to help inform their investment decisions. For example, a person might use a prediction to decide whether to buy or sell a particular cryptocurrency.
- To generate trading signals: Some cryptocurrency price prediction projects may aim to generate trading signals for use by traders.
- These signals could be based on technical analysis or other methods and could be used to help traders decide when to buy or sell a particular cryptocurrency.
- To provide educational resources: Some cryptocurrency price prediction projects may be designed to provide educational resources and information to help people better understand the cryptocurrency market and make informed investment decisions.
- Overall, the goals and objectives of a cryptocurrency price prediction project will depend on the specific focus and priorities of the project.

PROJECT PLAN

In Trading Methodology:

There are some difficulties that some traders encounter, which is how to choose a currency that has a future of ascending or declining to benefit as much as possible from it and profit from it in all its cases.

This project aims to have a mechanism that allows the trader to examine the digital currency market before taking the risk of putting his capital in an unstudied currency. Therefore, this model is a tool used by any trader to examine the currency that has the most influence on the digital currency market.

This model predicts the movement of the market index, is it in rise or fall

Thank you.

**We look forward to
completing this course
successfully and
impress the interviews
committee.**
